Depreciation Report

14 January 2022

Report Prepared For:

Aushomes Pty Ltd
Name: Ms Jess Kinghorn
Email: maintain@aushomes.com.au

Report Prepared By:

Mitchell Brandtman
Mitchell Brandtman

INTRODUCTION

This report has been prepared for .

Acquisition Date

We understand the acquisition date is 20th of December 2021.

The Acquisition Date is based on the Construction Completion Date.

Capitalisation Date

We understand the construction commencement date is approximately March 2021, based upon the client's advice or the available documentation.

Construction Cost of Building

Our estimate of the original construction cost to the date of completion is $338,180.00. A non-eligible allowance of $5,000.00 has been included for soft landscaping. Previous depreciation is not applicable.

The construction cost has been estimated utilising average costs at the date of construction completion and includes preliminary costs, statutory fees and professional fees, or where available has been based on the contract amount.

Our report does not include loose furniture, fittings, equipment, tenant fitout work etc.

Depreciation and the residual Building Allowance is allowed on the net cost of the building if constructed after 17 July 1985, inclusive of structural improvements if constructed after 27 February 1992 and exclusive of, to the best of our knowledge, amounts which are not construction expenditure as defined in section 43-70 of the Income Tax Assessment Act 1997.

Depreciation Methods

Depreciation schedules for both the Prime Cost method and the Diminishing Value method (including low value pooling) are contained in this report.

Advice should be sought from the client’s specialist tax adviser regarding the most appropriate method to be adopted.

Depreciable Items

Division 40 contains items of plant and equipment that may be depreciated at a higher rate than the capital allowance. The value for these items is based on fair market value at the date of acquisition.

Division 43 contains all other building components, which are not contained in Division 40. This constitutes the capital allowance. The depreciation amount is the same each year (except if pro-rata is applicable in the year of acquisition) over a 25 or 40 year period depending upon the capitalisation date.

Depreciation Rates

Various rates are applicable to individual items of plant, based upon the Taxation Commissioner's determination of the effective life.

Individual items of plant with a cost of less than $300.00 have been depreciated at a rate of 100%. Items which have an opening value less than $1,000.00, or a written down value (using the diminishing value method) of less than $1,000.00 are able to be depreciated at 18.75% in the first year and at 37.5% in further years using Low Value Pooling. Items with the rate of 18.75% are not required to be proportioned in the first year. Please refer to the pooling schedules for a detailed breakdown of these assets.

The rate applicable to the capital allowance is determined by the construction commencement date.

The rates contained within these schedules, are based upon the information contained within the current Australian Master Tax Guide.

Disclaimer

The depreciation schedules contained within this report have been prepared from the information provided by the client and the local authority where we have been instructed to obtain building approval searches. This report has been prepared for the sole use of the client and it is not to be relied upon by any third party.

Mitchell Brandtman is a firm of Quantity Surveyors and as such, is not qualified to give professional advice on matters relating to taxation claims and returns. We are, however, qualified to advise on costs of plant, equipment and building works. While we have dissected the various costs into the appropriate categories, in our opinion, we suggest the client consults their specialist tax adviser to confirm the schedules and suggested depreciation rates.

This report is produced on the terms and the understanding that Mitchell Brandtman is not:

(a) Responsible for the results of any actions taken on the basis of information in this document, or any error in, or omission from, this document.
(b) Engaged in rendering legal, accounting or taxation advice.

The construction cost estimate has been prepared for depreciation purposes. It is not an estimate of replacement cost nor is it suitable for any other purpose.

Following the Government announcement in the 2017-18 Federal Budget that it would limit depreciation deductions for owners of residential investment properties a legislation was released by Treasury on 14 July 2017.

From 1 July 2017 amendments to plant and equipment depreciation deductions will apply to residential investment properties where a contract was entered into to acquire a residential investment property after 7.30pm 9 May 2017 or if a previously owned residential property use is changed to derive rental income after that date.

Plant and equipment depreciation deductions will be limited to outlays (expenditure) actually incurred by investors and where the asset is new.

We have prepared this report based on our understanding of the legislation and recommend that further advice be sought from the client's tax adviser regarding any specific matters relating to the implication of these legislative changes.

COMPARATIVE ANALYSIS

CUMULATIVE ANALYSIS

DIMINISHING VALUE METHOD

&

LOW COST AND LOW VALUE POOLING SCHEDULE

The following section of the report outlines in detail the relevant depreciation entitlements available if the diminishing value method was adopted. The Section 40 ‘Plant & Equipment’ assets and the Section 43 ‘Capital Allowances’ are shown. Following the depreciation forecast for the diminishing value method, the low cost and low value pooling schedule is shown which identifies which Section 40 ‘Plant & Equipment’ assets have been allocated to the low-value pool.

PRIME COST METHOD

The following section of the report outlines in detail the relevant depreciation entitlements available if the prime cost method was adopted. The Section 40 ‘Plant & Equipment’ assets and the Section 43 ‘Capital Allowances’ are shown. The low cost and low value pooling schedule option is not shown as these schedules are based on the diminishing value method.
